

Project Management

ACCO Engineered Systems is an employee owned contractor with expertise in the areas of heating, ventilating, air conditioning, refrigeration, process piping, plumbing, industrial construction, building control systems, as well as service retrofit and maintenance.

ACCO is a fully integrated company with complete in-house engineering, fabrication, installation, commissioning and service capabilities. This integrated delivery system allows ACCO to provide its customers with the most practical, cost effective solutions for their particular mechanical and control system requirements.

We guarantee price, performance, and schedule.

Project Management

When we accept a job, we accept all the responsibility that goes with it. A Project Manager supervises the project from the initial contact through conceptual studies, engineering design, energy studies, sales, and construction (including final start-up and balancing). The responsibility continues through final acceptance and the warranty period.

For your project, an ACCO Project Manager will be your personal representative. This individual is your contact from the inception of your project through completion and on-going warranty. Your Project Manager's responsibility is to get your job done...on time and on budget.

ACCO pioneered this single source of responsibility to assure that we adhere strictly to all of the project requirements, quality demands and time schedules. We meet your deadlines.

Keeping on schedule requires a large amount of up-to-date information. ACCO maintains a computerized database on all projects to allow project managers to have immediate access to up-to-date labor reports, equipment and materials status, and time and cost accounting.

ACCO has successfully completed projects of every variety- from simple warehouse installations to complex semiconductor and bio-tech fabrication facilities requiring the most advanced technological skills.

We can work with an engineer of your choice to develop and analyze systems for your project, or you can utilize ACCO's in-house engineering resources to design the system for your project that meets your quality and budget requirements. In both cases, we guarantee price, performance, and schedule.
