

# Rigging

*ACCO Engineered Systems is an employee owned contractor with expertise in the areas of heating, ventilating, air conditioning, refrigeration, process piping, plumbing, industrial construction, building control systems, as well as service retrofit and maintenance.*

*ACCO is a fully integrated company with complete in-house engineering, fabrication, installation, commissioning and service capabilities. This integrated delivery system allows ACCO to provide its customers with the most practical, cost effective solutions for their particular mechanical and control system requirements.*

## Ensuring things are done correctly and safely, every time.

Scheduling rigs through ACCO's rigging department assures proper pre-planning. The correct permits will be in place, traffic plans will be coordinated, affected parties will be notified, and the end result will be satisfaction for all parties.

ACCO Engineered Systems maintains a full-time, dedicated rigging crew. Listed below are just a few of the many benefits of having a specialized in-house rigging department:

- Focused Training
- Comprehensive Safety Program
- Control of Speciality Equipment
- Extensive Experience
- Familiarity with Local Codes
- Proven Pre-Planning Checklist
- Team Environment

Rigging can be one of the most dangerous construction operations. ACCO's rigging department takes special care to ensure that things are done correctly and safely every time. Our rigging equipment is inspected, tested and certified on a regular basis, as well as stored properly when not in use. We use fully equipped rigging trucks, eliminating the prospect of not having the right tool.

It is not uncommon for members of a rigging crew to perform different jobs in their position. One day they may be joining copper pipes, and the next day they may be lifting chillers weighing more than 20 tons to the roof of a high rise building. This is never the case at ACCO. Our rigging crew is dedicated solely to rigging, which means that they are experts in their trade, and customers can rest assured that the crew working on their project is made up of only the most highly-skilled workers.

Whether by crane, helicopter or rolling in by dolly, ACCO's rigging crew is trained and equipped to perform the task safely and correctly every time.
